### Book Description

This small but comprehensive book presents the reception of the Darwinian theory of evolution in Greece, from the first debates on this issue in the 1870s to 2009, two hundredth anniversary year of Darwin and one hundred and fiftieth since the publication of the *Origin of species*. C. Krimbas, geneticist and member of the Academy of Athens, presents methodically and intelligibly the objections of the anti-Darwinists, the arguments of Darwin's supporters, and the involvement of institutions and society in this sensitive theological and political issue.
